CVE-2017-17518

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [White Dune](#) from [White Dune Project](#) contain the following vulnerability:

**** DISPUTED **** swt/motif/browser.c in White_dune (aka whitedune) 0.30.10 does not validate strings before launching the program specified by the BROWSER environment variable, which might allow remote attackers to conduct argument-injection attacks via a crafted URL. NOTE: This issue is being disputed as not being a vulnerability

because "the current version of white_dune (1.369 at <https://wdune.ourproject.org/>) do not use a "BROWSER environment variable". Instead, the "browser" variable is read from the \$HOME/.dunerc file (or from the M\$Windows registry). It is configurable in the "options" menu. The default is chosen in the ./configure script, which tests various programs, first tested is "xdg-open".

CVE-2017-17518 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.

CVSS3 Score: **8.8 - HIGH**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	NONE	REQUIRED
Scope	Confidentiality Impact	Integrity Impact	Availability Impact
UNCHANGED	HIGH	HIGH	HIGH

CVSS2 Score: **6.8 - MEDIUM**

Access Vector	Access Complexity	Authentication
NETWORK	MEDIUM	NONE
Confidentiality Impact	Integrity Impact	Availability Impact
PARTIAL	PARTIAL	PARTIAL
