CVE-2017-17662

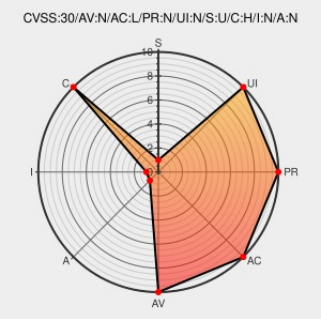
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Yawcam from Yawcam contain the following vulnerability:

Directory traversal in the HTTP server on Yawcam 0.2.6 through 0.6.0 devices allows attackers to read arbitrary files through a sequence of the form '.x./' or '....\x/' where x is a pattern composed of one or more (zero or more for the second pattern) of either \ or ..\ -- for example a '.\./', '....\/' or '...\./' sequence. For files with no extension, a single dot needs to be appended to ensure the HTTP server does not alter the request, e.g., a "GET /.\./.\./.\./.\./.\./.\./.\./windows/system32/drivers/etc/hosts." request.

CVE-2017-17662 has been assigned by cve@mitre.org to track the vulnerability - currently rated as HIGH severity.
