

# CVE-2017-17849

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                         |
|------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-17849                                                                                                          |
| <b>State</b>           | PUBLIC                                                                                                                  |
| <b>Assigner</b>        | cve@mitre.org                                                                                                           |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                            |
| <b>Published</b>       | 2017-12-27 17:08:00 UTC                                                                                                 |
| <b>Updated</b>         | 2018-07-28 01:29:00 UTC                                                                                                 |
| <b>Description</b>     | A buffer overflow vulnerability in GetGo Download Manager 5.3.0.2712 and earlier could allow remote HTTP servers to exe |

## Risk And Classification

**Problem Types:** CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor    | Product                | Version | Update | Edition | Language |
|-------------|-----------|------------------------|---------|--------|---------|----------|
| Application | Getgosoft | Getgo Download Manager | All     | All    | All     | All      |
