

# CVE-2017-5606

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-5606                                                                                                                       |
| <b>State</b>           | PUBLIC                                                                                                                              |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                       |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                        |
| <b>Published</b>       | 2017-02-09 20:59:00 UTC                                                                                                             |
| <b>Updated</b>         | 2020-01-22 16:01:00 UTC                                                                                                             |
| <b>Description</b>     | An incorrect implementation of "XEP-0280: Message Carbons" in multiple XMPP clients allows a remote attacker to impersonate a user. |

## Risk And Classification

**Problem Types:** CWE-20 | CWE-346

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                 | Product                | Version | Update | Edition | Language |
|-------------|------------------------|------------------------|---------|--------|---------|----------|
| Application | <a href="#">Xabber</a> | <a href="#">Xabber</a> | All     | All    | All     | All      |
| Application | <a href="#">Xabber</a> | <a href="#">Xabber</a> | All     | All    | All     | All      |
