CVE-2017-6931

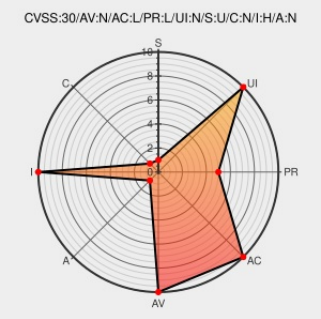
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Drupal from Drupal contain the following vulnerability:

In Drupal versions 8.4.x versions before 8.4.5 the Settings Tray module has a vulnerability that allows users to update certain data that they do not have the permissions for. If you have implemented a Settings Tray form in contrib or a custom module, the correct access checks should be added. This release fixes the only two implementations in core, but does not harden against other such bypasses. This vulnerability can be mitigated by disabling the Settings Tray module.

CVE-2017-6931 has been assigned by security@drupal.org to track the vulnerability - currently rated as MEDIUM severity.
