

# CVE-2017-8327

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-8327                                                                                                      |
| <b>State</b>           | PUBLIC                                                                                                             |
| <b>Assigner</b>        | cve@mitre.org                                                                                                      |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                       |
| <b>Published</b>       | 2017-04-29 20:59:00 UTC                                                                                            |
| <b>Updated</b>         | 2019-10-03 00:03:00 UTC                                                                                            |
| <b>Description</b>     | The bmpr_read_uncompressed function in imagew-bmp.c in libimageworsener.a in ImageWorsener before 1.3.1 allows ren |

## Risk And Classification

### Problem Types: CWE-400

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor      | Product       | Version | Update | Edition | Language |
|-------------|-------------|---------------|---------|--------|---------|----------|
| Application | Entropymine | Imageworsener | All     | All    | All     | All      |

## References

| Reference                                                                                            | Source  | Link                             |
