CVE-2018-6333

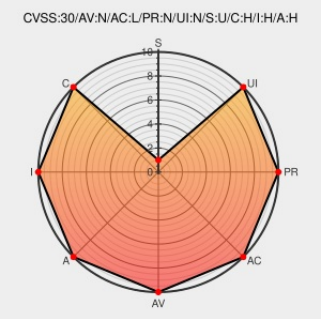
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Nuclide from Facebook contain the following vulnerability:

The hhvm-attach deep link handler in Nuclide did not properly sanitize the provided hostname parameter when rendering. As a result, a malicious URL could be used to render HTML and other content inside of the editor's context, which could potentially be chained to lead to code execution. This issue affected Nuclide prior to v0.290.0.

CVE-2018-6333 has been assigned by cve-assign@fb.com to track the vulnerability - currently rated as CRITICAL severity.

Affected Vendor/Software: **Facebook** - **Nuclide** version **!=> v0.290.0**

Affected Vendor/Software: **Facebook** - **Nuclide** version **<= v0.290.0**

CVSS3 Score: 9.8 - CRITICAL
