CVSS:31/AV:A/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H

Certain versions of [Dir-825/ac G1](#) from [D-link](#) contain the following vulnerability:

D-link DIR-825AC G1 devices have Insufficient Compartmentalization between a host network and a guest network that are established by the same device. In order to transfer data from the host network to the guest network, the sender joins and then leaves an IGMP group. After it leaves, the router (following the IGMP protocol) creates an IGMP

Membership Query packet with the Group IP and sends it to both the Host and the Guest networks. The data is transferred within the Group IP field, which is completely controlled by the sender.

CVE-2019-13264 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.
