CVE-2019-14228

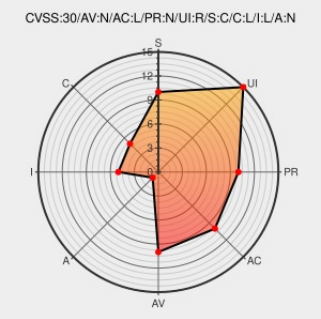
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Xavier from Angry-frog contain the following vulnerability:

Xavier PHP Management Panel 3.0 is vulnerable to Reflected POST-based XSS via the username parameter when registering a new user at admin/includes/adminprocess.php. If there is an error when registering the user, the unsanitized username will reflect via the error page. Due to the lack of CSRF protection on the admin/includes/adminprocess.php endpoint, an attacker is able to chain the XSS with CSRF in order to cause remote exploitation.

CVE-2019-14228 has been assigned by cve@mitre.org to track the vulnerability - currently rated as MEDIUM severity.
