CVE-2019-15062

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Dolibarr](#) from [Dolibarr](#) contain the following vulnerability:

An issue was discovered in Dolibarr 11.0.0-alpha. A user can store an IFRAME element (containing a user/card.php CSRF request) in his Linked Files settings page. When visited by the admin, this could completely take over the admin account. (The protection mechanism for CSRF is to check the Referer header; however, because the attack is from one of the application's own settings pages, this mechanism is bypassed.)

CVE-2019-15062 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.

CVSS3 Score: **8 - HIGH**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	LOW	REQUIRED
Scope	Confidentiality Impact	Integrity Impact	Availability Impact
UNCHANGED	HIGH	HIGH	HIGH

CVSS2 Score: **6 - MEDIUM**

Access Vector	Access Complexity	Authentication
NETWORK	MEDIUM	SINGLE
Confidentiality Impact	Integrity Impact	Availability Impact
PARTIAL	PARTIAL	PARTIAL
