CVSS:31/AV:N/AC:L/PR:L/UI:N/S:U/C:H/I:H/A:H

Certain versions of [Visual Access Manager](#) from [Seling](#) contain the following vulnerability:

An issue was discovered in Selest Visual Access Manager (VAM) 4.15.0 through 4.29. A user with valid credentials is able to create and write XML files on the filesystem via `/common/vam_editXml.php` in the web interface. The vulnerable PHP page checks none of these: the parameter that identifies the file name to be created, the destination path, or the extension. Thus, an attacker can manipulate the file name to create any type of file within the filesystem with arbitrary content.

CVE-2019-19988 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.
