Certain versions of [Bluecats Reveal](#) from [Bluecats](#) contain the following vulnerability:

The Android mobile application BlueCats Reveal before 3.0.19 stores the username and password in a clear text file. This file persists until the user logs out or the session times out from non-usage (30 days of no user activity). This can allow an attacker to compromise the affected BlueCats network implementation. The attacker would first need to gain physical control of the Android device or compromise it with a malicious app.

CVE-2019-5626 has been assigned by [cve@rapid7.com](#) to track the vulnerability - currently rated as **HIGH** severity.
