CVSS:31/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H

Certain versions of [Responsive Filemanager](#) from [Tecrail](#) contain the following vulnerability:

An issue was discovered in Responsive Filemanager through 9.14.0. In the `ajax_calls.php` file in the `save_img` action in the `name` parameter, there is no validation of what kind of extension is sent. This makes it possible to execute PHP code if a legitimate JPEG image contains this code in the EXIF data, and the `.php` extension is used in the `name` parameter. (A potential fast patch is to disable the `save_img` action in the config file.)

CVE-2020-10567 has been assigned by [M](#) [cve@mitre.org](#) to track the vulnerability - currently rated as **CRITICAL** severity.

CVSS3 Score: **9.8 - CRITICAL**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
