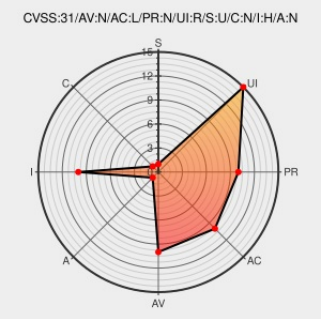
## CVE-2020-13674

Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Drupal from Drupal contain the following vulnerability:

The QuickEdit module does not properly validate access to routes, which could allow cross-site request forgery under some circumstances and lead to possible data integrity issues. Sites are only affected if the QuickEdit module (which comes with the Standard profile) is installed. Removing the "access in-place editing" permission from untrusted users will not fully mitigate the vulnerability.

CVE-2020-13674 has been assigned by security@drupal.org to track the vulnerability - currently rated as MEDIUM severity.
