Certain versions of [Security Manager](#) from [Cisco](#) contain the following vulnerability:

Multiple vulnerabilities in the Java deserialization function that is used by Cisco Security Manager could allow an unauthenticated, remote attacker to execute arbitrary commands on an affected device. These vulnerabilities are due to insecure deserialization of user-supplied content by the affected software. An attacker could exploit these

vulnerabilities by sending a malicious serialized Java object to a specific listener on an affected system. A successful exploit could allow the attacker to execute arbitrary commands on the device with the privileges of NT AUTHORITY\SYSTEM on the Windows target host. Cisco has not released software updates that address these vulnerabilities.

CVE-2020-27131 has been assigned by [psirt@cisco.com](#) to track the vulnerability - currently rated as **CRITICAL** severity.

The Cisco Product Security Incident Response Team (PSIRT) is aware of public announcements about these vulnerabilities. Cisco PSIRT is not aware of malicious use of the vulnerabilities that are described in this advisory.
