

# CVE-2020-4584

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2020-4584                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | psirt@us.ibm.com                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2020-10-30 14:15:00 UTC                                                                                                      |
| <b>Updated</b>         | 2022-06-29 21:16:00 UTC                                                                                                      |
| <b>Description</b>     | IBM i2 iBase 8.9.13 could allow a remote attacker to obtain sensitive information when a detailed technical error message is |

## Risk And Classification

### Problem Types: CWE-209

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product  | Version | Update | Edition | Language |
|-------------|--------|----------|---------|--------|---------|----------|
| Application | ibm    | i2 Ibase | All     | All    | All     | All      |
