

# CVE-2020-5678

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2020-5678                                                                                                                    |
| <b>State</b>           | PUBLIC                                                                                                                           |
| <b>Assigner</b>        | vultures@jpcert.or.jp                                                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                     |
| <b>Published</b>       | 2020-12-03 12:15:00 UTC                                                                                                          |
| <b>Updated</b>         | 2020-12-03 14:40:00 UTC                                                                                                          |
| <b>Description</b>     | Stored cross-site scripting vulnerability in GROWI v3.8.1 and earlier allows remote attackers to inject arbitrary script via uns |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                 | Product               | Version | Update | Edition | Language |
|-------------|------------------------|-----------------------|---------|--------|---------|----------|
| Application | <a href="#">Weseek</a> | <a href="#">Growi</a> | All     | All    | All     | All      |
