

# CVE-2021-20378

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2021-20378                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | psirt@us.ibm.com                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2021-07-07 17:15:00 UTC                                                                                                   |
| <b>Updated</b>         | 2021-07-09 16:31:00 UTC                                                                                                   |
| <b>Description</b>     | IBM Guardium Data Encryption (GDE) 3.0.0.2 and 4.0.0.4 does not invalidate session after logout which could allow an auti |

## Risk And Classification

### Problem Types: CWE-613

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product                  | Version | Update | Edition | Language |
|-------------|--------|--------------------------|---------|--------|---------|----------|
| Application | ibm    | Guardium Data Encryption | 3.0.0.2 | All    | All     | All      |
| Application | ibm    | Guardium Data Encryption | 4.0.0.4 | All    | All     | All      |
