CVE-2021-21317 - advisory for GHSA-p4pj-mg4r-x6v4

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Uap-core](#) from [Uap-core Project](#) contain the following vulnerability:

uap-core in an open-source npm package which contains the core of BrowserScope's original user agent string parser. In uap-core before version 0.11.0, some regexes are vulnerable to regular expression denial of service (REDoS) due to overlapping capture groups. This allows remote attackers to overload a server by setting the User-Agent

header in an HTTP(S) request to maliciously crafted long strings. This is fixed in version 0.11.0. Downstream packages such as uap-python, uap-ruby etc which depend upon uap-core follow different version schemes.

CVE-2021-21317 has been assigned by security-advisories@github.com to track the vulnerability - currently rated as **MEDIUM** severity.
