Certain versions of [Gpac](#) from [Gpac](#) contain the following vulnerability:

Multiple exploitable integer truncation vulnerabilities exist within the MPEG-4 decoding functionality of the GPAC Project on Advanced Content library v1.0.1. A specially crafted MPEG-4 input can cause an improper memory allocation resulting in a heap-based buffer overflow that causes memory corruption. The implementation of the parser used for the "Xtra" FOURCC code is handled. An attacker can convince a user to open a video to trigger this vulnerability.

CVE-2021-21862 has been assigned by [talos-cna@cisco.com](#) to track the vulnerability - currently rated as **HIGH** severity.
