Certain versions of [Wp-board](#) from [Wp-board Project](#) contain the following vulnerability:

The options.php file of the WP-Board WordPress plugin through 1.1 beta accepts a postid parameter which is not sanitised, escaped or validated before inserting to a SQL statement, leading to SQL injection. This is a time based SQLI and in the same function vulnerable parameter is passed twice so if we pass time as 5 seconds it takes 10 seconds to return since the query ran twice.

CVE-2021-24404 has been assigned by contact@wpscan.com to track the vulnerability - currently rated as **HIGH** severity.
