CVE-2021-31356 - advisory for JSA11221

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#)

CVSS:31/AV:L/AC:L/PR:L/UI:N/S:U/C:H/I:H/A:H

Certain versions of **Junos Os Evolved** from **Juniper** contain the following vulnerability:

A command injection vulnerability in command processing on Juniper Networks Junos OS Evolved allows an attacker with authenticated CLI access to be able to bypass configured access protections to execute arbitrary shell commands within the context of the current user. The vulnerability allows an attacker to bypass command authorization

restrictions assigned to their specific user account and execute commands that are available to the privilege level for which the user is assigned. For example, a user that is in the super-user login class, but restricted to executing specific CLI commands could exploit the vulnerability to execute any other command available to an unrestricted admin user. This vulnerability does not increase the privilege level of the user, but rather bypasses any CLI command restrictions by allowing full access to the shell. This issue affects Juniper Networks Junos OS Evolved: All versions prior to 20.4R3-S1-EVO; All versions of 21.1-EVO and 21.2-EVO.

CVE-2021-31356 has been assigned by sirt@juniper.net to track the vulnerability - currently rated as **HIGH** severity.

Juniper SIRT is not aware of any malicious exploitation of this vulnerability.

Affected Vendor/Software: **Juniper Networks - Junos OS Evolved** version < 20.4R3-S1-EVO

Affected Vendor/Software: **Juniper Networks - Junos OS Evolved** version >= 21.1R1-EVO

Affected Vendor/Software: **Juniper Networks - Junos OS Evolved** version >= 21.2R1-EVO

Vulnerability Patch/Work Around

Use access lists or firewall filters to limit access to the device via CLI only from trusted hosts and from trusted administrators.

CVSS3 Score: **7.8 - HIGH**
