CVE-2021-32859 - advisory for GHSL-2021-1042

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#)

Certain versions of [Date Range Picker](#) from [Baremetrics](#) contain the following vulnerability:

The Baremetrics date range picker is a solution for selecting both date ranges and single dates from a single calendar view. Versions 1.0.14 and prior are prone to cross-site scripting (XSS) when handling untrusted `placeholder` entries. An attacker who is able to influence the field `placeholder` when creating a `Calendar` instance is able to supply arbitrary `html` or `javascript` that will be rendered in the context of a user leading to XSS. There are no known patches for this issue.

CVE-2021-32859 has been assigned by [security-advisories@github.com](#) to track the vulnerability - currently rated as **MEDIUM** severity.

Affected Vendor/Software: [Baremetrics](#) - **baremetrics-calendar** version **<= 1.0.14**

CVSS3 Score: **6.1 - MEDIUM**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
