

CVE-2021-35492

Published on: 10/05/2021 12:00:00 AM UTC

Last Modified on: 10/09/2021 03:26:00 AM UTC

CVE-2021-35492

Source: Mitre

Source: Nist

Print: PDF

Certain versions of [Streaming Engine](#) from [Wowza](#) contain the following vulnerability:

Wowza Streaming Engine through 4.8.11+5 could allow an authenticated, remote attacker to exhaust filesystem resources via the `/enginemanager/server/vhost/historical.jsdata vhost` parameter. This is due to the insufficient management of available filesystem resources.

An attacker could exploit this vulnerability through the Virtual Host

Monitoring section by requesting random virtual-host historical data and exhausting available filesystem resources. A successful exploit could allow the attacker to cause database errors and cause the device to become unresponsive to web-based management. (Manual intervention is required to free filesystem resources and return the application to an operational state.)

CVE-2021-35492 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **MEDIUM** severity.

CVSS3 Score: **6.5 - MEDIUM**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	LOW	NONE
Scope	Confidentiality Impact	Integrity Impact	Availability Impact
UNCHANGED	NONE	NONE	HIGH

CVSS2 Score: **4 - MEDIUM**

Access Vector	Access Complexity	Authentication
NETWORK	LOW	SINGLE
Confidentiality Impact	Integrity Impact	Availability Impact
NONE	NONE	PARTIAL
