

# CVE-2021-42867

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2021-42867                                                                                                                  |
| <b>State</b>           | PUBLIC                                                                                                                          |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                   |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                    |
| <b>Published</b>       | 2022-03-31 18:15:00 UTC                                                                                                         |
| <b>Updated</b>         | 2022-04-07 13:17:00 UTC                                                                                                         |
| <b>Description</b>     | A Cross Site Scripting (XSS) vulnerability exists in DanPros htmyl 2.8.1 via the Description field in (1) admin/config, and (2) |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product | Version | Update | Edition | Language |
|-------------|--------|---------|---------|--------|---------|----------|
| Application | Htmly  | Htmly   | 2.8.1   | All    | All     | All      |
