

CVE-2021-45105

Published on: Not Yet Published

Last Modified on: 10/06/2022 05:31:00 PM UTC

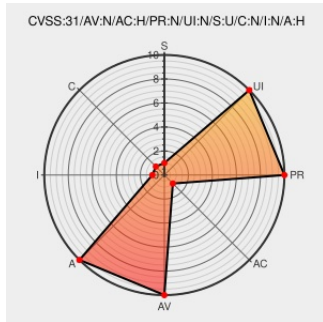

CVE-2021-45105

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of [Log4j](#) from [Apache](#) contain the following vulnerability:

Apache Log4j2 versions 2.0-alpha1 through 2.16.0 (excluding 2.12.3 and 2.3.1) did not protect from uncontrolled recursion from self-referential lookups. This allows an attacker with control over Thread Context Map data to cause a denial of service when a crafted string is interpreted. This issue was fixed in Log4j 2.17.0, 2.12.3, and 2.3.1.

CVE-2021-45105 has been assigned by security@apache.org to track the vulnerability - currently rated as **MEDIUM** severity.

Vulnerability Patch/Work Around

Implement one of the following mitigation techniques: * Java 8 (or later) users should upgrade to release 2.17.0. Alternatively, this can be mitigated in configuration: * In PatternLayout in the logging configuration, replace Context Lookups like `{ctx:loginId}` or `$$ {ctx:loginId}` with Thread Context Map patterns (%X, %mdc, or %MDC). * Otherwise, in the configuration, remove references to Context Lookups like `{ctx:loginId}` or `$$ {ctx:loginId}` where they originate from sources external to the application such as HTTP headers or user input.

CVSS3 Score: **5.9 - MEDIUM**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	HIGH	NONE	NONE
Scope	Confidentiality Impact	Integrity Impact	Availability Impact
UNCHANGED	NONE	NONE	HIGH

CVSS2 Score: **4.3 - MEDIUM**

Access Vector	Access Complexity	Authentication
NETWORK	MEDIUM	NONE
Confidentiality Impact	Integrity Impact	Availability Impact
NONE	NONE	PARTIAL
