

# CVE-2022-1579

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                |
|------------------------|------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-1579                                                                                  |
| <b>State</b>           | PUBLIC                                                                                         |
| <b>Assigner</b>        | contact@wpscan.com                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                   |
| <b>Published</b>       | 2022-11-21 11:15:00 UTC                                                                        |
| <b>Updated</b>         | 2023-11-07 03:42:00 UTC                                                                        |
| <b>Description</b>     | The function check_is_login_page() uses headers for the IP check, which can be easily spoofed. |

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                       | Product                         | Version | Update | Edition | Language |
|-------------|------------------------------|---------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Gunkastudios</a> | <a href="#">Login Block Ips</a> | All     | All    | All     | All      |
