

# CVE-2022-21167

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                            |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-21167                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                     |
| <b>Assigner</b>        | report@snyk.io                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                               |
| <b>Published</b>       | 2022-05-01 16:15:00 UTC                                                                                                    |
| <b>Updated</b>         | 2022-10-07 15:11:00 UTC                                                                                                    |
| <b>Description</b>     | All versions of package masuit.tools.core are vulnerable to Arbitrary Code Execution via the ReceiveVarData<T> function in |

## Risk And Classification

**Problem Types:** NVD-CWE-noinfo

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor               | Product                      | Version | Update | Edition | Language |
|-------------|----------------------|------------------------------|---------|--------|---------|----------|
| Application | <a href="#">ldqk</a> | <a href="#">Masuit.tools</a> | All     | All    | All     | All      |
| Application | <a href="#">Ldqk</a> | <a href="#">Masuit.tools</a> | All     | All    | All     | All      |
