

# CVE-2022-25226

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-25226                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | help@fluidattacks.com                                                                                                     |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2022-04-18 17:15:00 UTC                                                                                                   |
| <b>Updated</b>         | 2023-08-08 14:21:00 UTC                                                                                                   |
| <b>Description</b>     | ThinVNC version 1.0b1 allows an unauthenticated user to bypass the authentication process via 'http://thin-vnc:8080/cmd?c |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                    | Product                 | Version | Update | Edition | Language |
|-------------|---------------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Cybelsoft</a> | <a href="#">Thinvnc</a> | 1.0     | b1     | All     | All      |

## References
