

# CVE-2022-34768

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-34768                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                         |
| <b>Assigner</b>        | cna@cyber.gov.il                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                   |
| <b>Published</b>       | 2022-08-05 16:15:00 UTC                                                                                                        |
| <b>Updated</b>         | 2022-09-01 17:15:00 UTC                                                                                                        |
| <b>Description</b>     | insert HTML / js code inside input how to get to the vulnerable input : Workers &gt; worker nickname &gt; inject in this input |

## Risk And Classification

**Problem Types:** NVD-CWE-noinfo

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor     | Product                      | Version | Update | Edition | Language |
|-------------|------------|------------------------------|---------|--------|---------|----------|
| Application | Supersmart | Supersmart.me - Walk Through | -       | All    | All     | All      |

## References
