

# CVE-2022-38668

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-38668                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | cve@mitre.org                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2022-08-22 20:15:00 UTC                                                                                                   |
| <b>Updated</b>         | 2023-08-08 14:22:00 UTC                                                                                                   |
| <b>Description</b>     | HTTP applications (servers) based on Crow through 1.0+4 may reveal potentially sensitive uninitialized data from stack me |

## Risk And Classification

**Problem Types:** CWE-908

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor  | Product | Version | Update | Edition | Language |
|-------------|---------|---------|---------|--------|---------|----------|
| Application | Crowcpp | Crow    | 1.0\+4  | All    | All     | All      |

## References

| Reference                                                                                                                        | Source  |
