

# CVE-2022-45721

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                     |
|------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-45721                                                                                                      |
| <b>State</b>           | PUBLIC                                                                                                              |
| <b>Assigner</b>        | cve@mitre.org                                                                                                       |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                        |
| <b>Published</b>       | 2022-12-23 19:15:00 UTC                                                                                             |
| <b>Updated</b>         | 2023-11-07 03:54:00 UTC                                                                                             |
| <b>Description</b>     | IP-COM M50 V15.11.0.33(10768) was discovered to contain a buffer overflow via the picName parameter in the formDelW |

## Risk And Classification

### Problem Types: CWE-120

## NVD Known Affected Configurations (CPE 2.3)

| Type             | Vendor                 | Product                      | Version    | Update | Edition | Language |
|------------------|------------------------|------------------------------|------------|--------|---------|----------|
| Hardware         | <a href="#">Ip-com</a> | <a href="#">M50</a>          | -          | All    | All     | All      |
| Operating System | <a href="#">Ip-com</a> | <a href="#">M50 Firmware</a> | 15.11.0.33 | All    | All     | All      |
