

# CVE-2022-47581

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                          |
|------------------------|------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-47581                                                                           |
| <b>State</b>           | PUBLIC                                                                                   |
| <b>Assigner</b>        | cve@mitre.org                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                             |
| <b>Published</b>       | 2022-12-21 17:15:00 UTC                                                                  |
| <b>Updated</b>         | 2022-12-28 18:58:00 UTC                                                                  |
| <b>Description</b>     | Isode M-Vault 16.0v0 through 17.x before 17.0v24 can crash upon an LDAP v1 bind request. |

## Risk And Classification

**Problem Types:** NVD-CWE-noinfo

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                | Product                 | Version | Update | Edition | Language |
|-------------|-----------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Isode</a> | <a href="#">M-vault</a> | All     | All    | All     | All      |
