

# CVE-2022-4930

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2022-4930                                                                                                                  |
| <b>State</b>           | PUBLIC                                                                                                                         |
| <b>Assigner</b>        | cna@vuldb.com                                                                                                                  |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                   |
| <b>Published</b>       | 2023-03-06 16:15:00 UTC                                                                                                        |
| <b>Updated</b>         | 2023-11-07 03:59:00 UTC                                                                                                        |
| <b>Description</b>     | A vulnerability classified as problematic was found in nuxsmin sysPass up to 3.2.4. Affected by this vulnerability is an unkno |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor  | Product | Version | Update | Edition | Language |
|-------------|---------|---------|---------|--------|---------|----------|
| Application | Syspass | Syspass | All     | All    | All     | All      |

## References
