CVE-2023-26471 - advisory for GHSA-9cqm-5wf7-wcj7

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#)

Certain versions of [Xwiki](#) from [Xwiki](#) contain the following vulnerability:

XWiki Platform is a generic wiki platform. Starting in version 11.6-rc-1, comments are supposed to be executed with the right of superadmin but in restricted mode (anything dangerous is disabled), but the async macro does not take into account the restricted mode. This means that any user with comment right can use the async macro to make it execute any wiki content with the right of superadmin. This has been

patched in XWiki 14.9, 14.4.6, and 13.10.10. The only known workaround consists of applying a patch and rebuilding and redeploying `org.xwiki.platform:xwiki-platform-rendering-async-macro`.

CVE-2023-26471 has been assigned by [security-advisories@github.com](#) to track the vulnerability - currently rated as **HIGH** severity.
