| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                                                                                                                                                      |
| <b>Published</b>       | 2023-05-15 15:15:00 UTC                                                                                                                                                                                                                                           |
| <b>Updated</b>         | 2023-05-22 13:47:00 UTC                                                                                                                                                                                                                                           |
| <b>Description</b>     | An issue in the sqlc_make_policy_trig component of openlink virtuoso-opensource v7.2.9 allows attackers to cause a Denial of Service (DoS) by sending a large number of requests to the component, which can cause the component to crash or become unresponsive. |

## Risk And Classification

### Problem Types: CWE-89

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                     | Product                  | Version | Update | Edition | Language |
|-------------|----------------------------|--------------------------|---------|--------|---------|----------|
| Application | <a href="#">Openlinksw</a> | <a href="#">Virtuoso</a> | 7.2.9   | All    | All     | All      |
