

# CVE-2023-34196

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2023-34196                                                                                                                   |
| <b>State</b>           | PUBLIC                                                                                                                           |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                    |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                     |
| <b>Published</b>       | 2023-08-03 03:15:00 UTC                                                                                                          |
| <b>Updated</b>         | 2023-08-08 14:42:00 UTC                                                                                                          |
| <b>Description</b>     | In the Keyfactor EJBCA before 8.0.0, the RA web certificate distribution servlet /ejbca/ra/cert allows partial denial of service |

## Risk And Classification

**Problem Types:** CWE-287

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                    | Product               | Version | Update | Edition | Language |
|-------------|---------------------------|-----------------------|---------|--------|---------|----------|
| Application | <a href="#">Keyfactor</a> | <a href="#">Ejbca</a> | All     | All    | All     | All      |
