

# CVE-2023-43630

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2023-43630                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@asrg.io                                                                                                                 |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2023-09-20 15:15:00 UTC                                                                                                     |
| <b>Updated</b>         | 2023-09-28 06:15:00 UTC                                                                                                     |
| <b>Description</b>     | PCR14 is not in the list of PCRs that seal/unseal the “vault” key, but due to the change that was implemented in commit “76 |

## Risk And Classification

### Problem Types: CWE-522

## NVD Known Affected Configurations (CPE 2.3)

| Type             | Vendor                          | Product                                    | Version | Update | Edition | Language |
|------------------|---------------------------------|--------------------------------------------|---------|--------|---------|----------|
| Operating System | <a href="#">Linuxfoundation</a> | <a href="#">Edge Virtualization Engine</a> | All     | All    | All     | All      |
