CVE-2023-4915

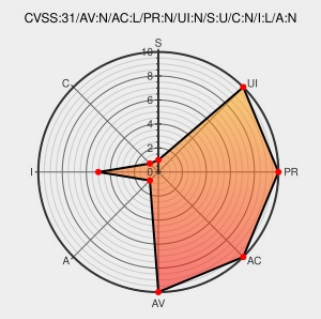
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Wp User Control from Palmspark contain the following vulnerability:

The WP User Control plugin for WordPress is vulnerable to unauthorized password resets in versions up to, and including 1.5.3. This is due to the plugin using native password reset functionality, with insufficient validation on the password reset function (in the WP User Control Widget). The function changes the user's password after providing the email. The new password is only sent to the user's email, so the attacker does not have access to the new password.

CVE-2023-4915 has been assigned by security@wordfence.com to track the vulnerability - currently rated as MEDIUM severity.

Affected Vendor/Software: **wmsedgar** - **WP User Control** version **<= 1.5.3**

CVSS3 Score: 5.3 - MEDIUM

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	NONE	NONE
Scope	**Confidentiality Impact**	**Integrity Impact**	**Availability Impact**
