

CVE-2023-5562

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

Summary

CVE	CVE-2023-5562
State	PUBLIC
Assigner	security@knime.com
Source Priority	CVE Program / NVD first with legacy fallback
Published	2023-10-12 20:15:00 UTC
Updated	2023-10-18 13:00:00 UTC
Description	An unsafe default configuration in KNIME Analytics Platform before 5.2.0 allows for a cross-site scripting attack. When KNIME Analytics Platform is configured with the default settings, it is vulnerable to a cross-site scripting attack. The attack is triggered by a malicious user who can inject a script into the application. The script can then execute arbitrary code in the context of the application, which can lead to the disclosure of sensitive information or the execution of malicious actions. The vulnerability is caused by the use of the document.write() method to render the output of the application. This method is vulnerable to cross-site scripting attacks because it does not sanitize the input. The vulnerability is present in all versions of KNIME Analytics Platform before 5.2.0.

Risk And Classification

Problem Types: CWE-79

NVD Known Affected Configurations (CPE 2.3)

Type	Vendor	Product	Version	Update	Edition	Language
Application	Knime	Knime Analytics Platform	All	All	All	All
