IGL-Technologies eParking.fi Insufficient Session Expiration

MITRE | NVD | CVE.ORG | JSON API | Print: PDF

Summary

CVE	CVE-2026-32663
State	PUBLISHED
Assigner	icscert
Source Priority	CVE Program / NVD first with legacy fallback
Published	2026-03-20 23:16:44 UTC
Updated	2026-05-06 18:14:24 UTC
Description	The WebSocket backend uses charging station identifiers to uniquely associate sessions but allows multiple endpoints to c

Risk And Classification

Primary CVSS: v4.0 6.9 MEDIUM from ics-cert@hq.dhs.gov

Vendor Comments And Credit

Discovery Credit

CNA: Khaled Sarieddine and Mohammad Ali Sayed reported this vulnerability to CISA. (en)

Additional Advisory Data

Solutions

CNA: IGL-Technologies has updated eParking's OCPP servers to reduce the risks posed by the vulnerability. These updates implemented the following security controls: 1-Enforce modern security profiles and stronger authentication. 2-Device level whitelisting was implemented to ensure authorized devices connect. 3-Rate limiting controls prevent excessive requests and reduces denial-of-service attacks. 4-Enhanced automated monitoring and alerting to detection abnormal network activity.

CNA: Devices using the encrypted deployment of eParking's OCPP servers or IGL-Technologies proprietary eTolppa protocol are not impacted by these vulnerabilities.

CNA: To prevent this in the future IGL-Technologies will continue vulnerability monitoring under their ISO 27001:2022 security program and tighten security requirements for future third-party OCPP hardware approvals.

CNA: For more information please contact the IGL-Technologies security team at this email address: security@igl.fi. mailto:security@igl.fi

There are currently no legacy QID mappings associated with this CVE.
